

May 8th, 2018

Lee County Utility Coordinating Meeting

PSNC Energy, 800 N. Horner Blvd., Sanford, NC

Meeting Time: The meeting was called to order by Michael Lamping at 1:35 pm and introductions were made.

Total Members Present: There were a total of fourteen members.

Mike Lamping asked if anyone would like to volunteer for the secretary position for this UCC and no one volunteered. Idea was tabled and need to explore this at our next meeting.

New Business and Projects:

James Whittaker with Windstream stated there are new installations on Copper Ridge and East Providence. Relocation of one of their lines on Highway 42 and installing fiber for several new housing subdivisions within Lee County.

Jamie Yow with NCDOT stated they are doing a bridge replacement on Highway 42 and have several other small projects currently in production.

Tony Carroll with PSNC stated there is a washout at 1200 Pinehurst Street. He explained that normal rain runoff has created a sinkhole at this address and they have made several previous repairs at this very address. He then asked **Michael Lamping** if he would meet him on site to make a proper evaluation as to what could be done and who would be financially responsible for this repair. **Michael** had stated that there are some legalities involved and might be considered to fall under the reasonable use law.

Kevin Smith with NC811 gave the presentation, with a strong emphasis of the meeting on the importance of white lining. A white lining handout was given out. Meeting concluded shortly after the NC811 presentation.

WHITE PAINT OR FLAGS ON A JOB SITE ELIMINATES GUESSWORK.

Sometimes it is difficult for excavators to relay the exact location of their dig sites to the one call center. Even clear and accurate information relayed in writing or verbally to one person may not be clear to another. With white lining, locators have excavation information on paper, and also have a clearly marked excavation area. White lining helps to avoid misinterpretation and allows for more accurate locates.

BEST PRACTICES CHAPTER 5—EXCAVATION

Practice Statement 5-2: White Lining: When the excavation site cannot be clearly and adequately identified on the locate ticket, the excavator designates the route and/or area to be excavated using white premarking prior to the arrival of the locator.

Guidelines for Excavation Delineation^{9/}

The following marking illustrations are examples of how excavators may choose to mark their area of proposed excavation. The use of white marking products (e.g., paint, flags, stakes, whiskers, or a combination of these) may be used to identify the excavation site.

Single Point Excavations Markings

Delineate in white^{62/} the proposed area of excavation using a continuous line, dots marking the radius or arcs, dashes marking the four corners of the project, or dashes outlining the excavation project. Limit the size of each dash to approximately 6 in. to 12 in. long and 1 in. wide with interval spacing approximately 4 ft to 50 ft apart. Reduce the separation of excavation marks to a length that can reasonably be seen by the operator's locators when the terrain at an excavation site warrants. Dots of approximately 1 in. diameter typically are used to define arcs or radii and may be placed at closer intervals in lieu of dashes.

Single Stake Marking Center Point of Excavation Site

When an excavation site is contained within a 50 ft maximum radius or less, it can be delineated with a single stake that is positioned at the proposed center of the excavation. If the excavator chooses this type of delineation, they must convey that they have delineated the excavation site with a single stake at the center of the excavation and include the radius of the site in the notification to the one call center. This single stake is white in color and displays the excavator's company identifier (name, abbreviations, or initials) and the radius of the excavation site in black letters on the stake or with a notice attached to the stake.

Trenching, Boring, or Other Continuous-Type Excavations

Continuous Excavation Marking

Mark in white^{62/} the proposed centerline of planned excavation using 6 in. to 12 in. x 1 in. arrows approximately 4 ft to 50 ft apart to show direction of excavation. Reduce the separation of excavation marks to a length that can reasonably be seen by the operator's locators when the terrain at an excavation site warrants. Mark lateral excavations with occasional arrows showing excavation direction from centerline with marks at curb or property line if crossed. Dots may be used for curves and closer interval marking.

Stake, Flag, or Whisker Excavation Markers

Delineate the proposed area of excavation using stakes, flags, or whiskers instead of spray paint to mark radius or arcs; the four corners of the project; or when outlining the excavation project. Limit the interval spacing to approximately 4 ft to 50 ft. Reduce the separation of excavation marks to a length that can reasonably be seen by the operator's locators when the terrain at an excavation site warrants. Stakes, flags, or whiskers provided to illustrate arcs or radii may be placed at closer intervals to define the arc or radius. Stakes, flags, or whiskers are white in color and display the excavator's company identifier (name, abbreviations, or initials).
